

EOMS CODE - BB05 - B

AN INTERNSHIP REPORT

Submitted by

VISHNUPRASATH J- 412522116501

In Partial fulfilment for the award of the degree

of

BACHELOR OF ENGINEERING

in

MECHANICAL AND AUTOMATION ENGINEERING

SRI SAI RAM ENGINEERING COLLEGE

(An Autonomous Institution; Affiliated to Anna University, Chennai -600 025)

ANNA UNIVERSITY: CHENNAI 600 025

APRIL 2026

SRI SAI RAM ENGINEERING COLLEGE

(AN AUTONOMOUS INSTITUTION AFFILIATED TO ANNA UNIVERSITY, CHENNAI – 600 025)

BONAFIDE CERTIFICATE

Certified that this internship report is the bonafide work of **VISHNUPRASATH J**
Reg. No. **412522116501** who has successfully completed this internship in the following companies.

1. Francium Tech

2. Venkateswara Industries

INTERNSHIP COORDINATOR

Dr.G.RAVI

HEAD OF THE DEPARTMENT

Dr.N.MANI

DETAILS OF INTERNSHIP

INTERNSHIP NUMBER	INDUSTRY NAME	ROLE	MODE OF INTERNSHIP	FROM DATE TO DATE	YEAR / SEM
I	Francium Tech	Internship	OFFLINE	13/11/2024 to 12/12/2024	III/VI
II	Venkateswara Industries	Internship	OFFLINE	30/03/2026 to 16/04/2026	IV/VIII

INTERNSHIP I

FRANCIUM TECH

ACKNOWLEDGEMENT

We here by acknowledge our sincere thanks to **FRANCIUM TECH** for accepting our request and allowing us to undergo the industrial internship

Our heartfelt thanks to **BRAGADEESH** for giving us this opportunity for internship.

Our sincere gratitude to our beloved **Founder Chairman Shri. MJF. Ln. LEO MUTHU** for his great endeavours in establishing this institution and standing as a figure of guidance.

Our heartfelt thanks to our **Chairman and CEO Dr. Sai Prakash Leo Muthu** for providing industrial interaction to the faculty members and students.

Our heartfelt thanks to our Principal **Dr. J. RAJA** and **Dr. A. Rajendra Prasad**, Dean Students Affairs for their kind help, advice and inspiration.

We wish to express our gratitude to our beloved Head of the Department **Dr.N.MANI**, for his encouragement, support and guidance.

We wish to express our special thanks to **Dr.G.RAVI** , for support in attending this training.

A Special thanks to all the heads of the departments, HR, and all employees of **Fracium Tech** for their support for imparting knowledge about the industry and various processes involved in the industry throughout the training.

CHAPTER 1

INTRODUCTION

Securing an internship at Francium Technologies Private Limited was a pivotal opportunity during my academic pursuit at Sri Sairam Engineering College. This section outlines initial expectations, objectives set for the internship, and provides a brief overview of the organization. Francium Technologies Private Limited is a software and IT solutions company based in Chennai, Tamil Nadu. The company specializes in software development, IT operations, digital transformation, and technology-driven products and services for clients across various sectors.

1.1 About Francium Technologies Private Limited

Francium Technologies Private Limited is headquartered at M-212, Monday Block, Akshaya January Thaiyur B Village, Chennai Kanchi puram TN 603103. The organization operates with a mission to deliver innovative, high-quality software solutions that meet industry standards and client expectations. The company works across software development processes, IT operations, and digital systems, helping businesses improve their operational efficiency through technology.

The company is led by experienced technology professionals committed to fostering a culture of learning, innovation, and engineering excellence. Its operations cover a range of services including web and application development, back-end systems integration, cloud operations, and technology consulting.

1.2 Services Offered by the Company

- Software Development & Engineering
- IT Operations & Infrastructure Management
- Web Application Development
- Cloud Services & Digital Transformation
- Technology Consulting & Product Development
- Back-end Systems Integration

CHAPTER 2

OBJECTIVES

The primary objective of this internship at Francium Technologies Private Limited was to bridge the gap between theoretical knowledge gained in the classroom and its real-world application in a professional IT and software development environment. As a Mechanical and Automation Engineering student, gaining cross-disciplinary exposure to IT operations and software processes offered invaluable insight into digital systems that increasingly drive modern manufacturing and engineering.

One of the major goals was to understand how software development processes are structured and executed in a professional IT company. Observing and participating in various stages of software development — from planning, coding, testing, to deployment — helped me appreciate the systematic workflows that underpin technology-driven organizations.

Another key learning objective was to develop familiarity with IT operations, including how servers, networks, databases, and digital systems are managed and maintained in a real-world company environment. I aimed to understand how these backend processes support the day-to-day functioning of a software organization.

Understanding professional workplace etiquette in a technology company was a critical objective. I was introduced to collaborative team structures, project management methodologies, version control systems, and how engineers communicate and coordinate in a fast-paced development environment.

My internship also focused on learning the importance of code quality, documentation, and systematic problem-solving. I assisted in identifying solutions, drafting technical documentation, and participating in code review discussions. These practices taught me how quality assurance and continuous improvement are embedded in software development culture.

Interacting with experienced software engineers and technology professionals gave me opportunities to develop communication skills, confidence, and a professional outlook. Participating in team discussions, listening to project-related conversations, and asking relevant questions helped me understand how engineers collaborate, troubleshoot, and deliver results.

The internship also motivated me to pursue further learning in digital technologies, automation software, and industrial IT systems — areas that are increasingly relevant to modern mechanical and automation engineering careers.

In conclusion, the primary objective of this internship was not just to gain IT exposure but to broaden my engineering perspective and develop into a technically rounded, career-oriented professional. Through this experience at Francium Technologies Private Limited, I took a strong step toward achieving my long-term academic and professional goals.

2.1 Application Developed by Francium Tech

Francium AI:

Figure : 2.1.1 Francium AI

Francium AI is a mobile-based AI chat application developed by Francium Technologies Pvt. Ltd. It allows users to ask questions and receive instant AI-generated answers. The app supports text input, speech-to-text, and text-to-speech features, making it easy and accessible for users. It also includes chat history, copy/share options, Google login, and a simple user-friendly interface. Francium AI helps students, professionals, and general users get quick information, clarify doubts, generate ideas, and improve productivity through artificial intelligence.

Assetolio :

Figure: 2.1.2 Assetolio

Assetolio is an IT asset lifecycle management application developed by Francium Tech. It helps organizations manage and track company assets such as computers, laptops, software, accessories, and other IT resources. The application supports asset inventory, asset assignment, ownership details, location tracking, movement history, incident records, and asset status monitoring. Assetolio helps companies reduce manual work, maintain accurate records, improve asset visibility, and manage the complete lifecycle of IT assets efficiently.

Trending Tech News:

Figure: 2.1.3 Trending Tech News

Trending Tech News is a cross-platform mobile application developed by Francium Technologies Pvt. Ltd. It provides users with the latest technology-related news from popular tech sources in one place. The app is designed mainly for developers, students, and technology enthusiasts who want to stay updated with new trends, software updates, gadgets, programming, artificial intelligence, and startup news. It offers a simple user interface, quick access to articles, and regular updates, helping users save time and learn about current developments in the technology world.

Soul search:

Figure:2.1.4 Soul search

Soul Search is a matrimony application developed by Francium Technologies Pvt. Ltd. It helps users find suitable marriage matches through a digital platform. The app allows users to create profiles, search for matches, view partner details, and connect with suitable profiles. It focuses on secure matchmaking by using profile verification and privacy features. Soul Search is useful for individuals and families looking for marriage alliances in a simple, organized, and user-friendly way.

CHAPTER 3

RESPONSIBILITIES

Day 1 – Wednesday – 13/11/2024

The internship commenced with an orientation and induction session. I was introduced to the company environment, organizational structure, team members, and the nature of projects handled by Francium Technologies. The HR team briefed me on professional conduct, work culture, and workplace safety guidelines. I was provided access to necessary tools and systems.

Day 2 – Thursday – 14/11/2024

I was introduced to the software development workflow and the IT operations team. I observed how project tasks are assigned, tracked, and managed using digital project management tools. I learned about version control systems and how code repositories are structured and maintained in the company.

Day 3 – Friday – 15/11/2024

I began observing and assisting with software development activities. I was familiarized with the programming languages, frameworks, and development environments used by the team. I shadowed senior developers and learned about the code review and quality assurance processes.

Day 4 – Saturday – 16/11/2024

I focused on understanding back-end development processes, including database management, server-side logic, and API integration. I was shown how various system components communicate with each other and how data flows within a software application.

Day 5 – Monday – 18/11/2024

I worked on basic front-end tasks, observing how user interface components are built and tested. I assisted the team in identifying and resolving minor UI issues and learned about the testing protocols used to validate product functionality.

Day 6 – Tuesday – 19/11/2024

I attended a project planning meeting where I observed how team leads discuss sprint goals, assign tasks, and set delivery timelines. I learned about Agile methodology and how iterative development processes improve software delivery efficiency.

Day 7 – Wednesday – 20/11/2024

I was assigned documentation tasks. I prepared technical summaries for specific modules, wrote process documentation, and learned how well-maintained documentation supports onboarding and knowledge transfer within a development team.

Day 8 – Thursday – 21/11/2024

I assisted in IT operations activities, including system monitoring, basic network checks, and reviewing server logs. I learned how IT infrastructure is maintained to ensure uptime and reliability for the applications being developed and deployed.

Day 9 – Friday – 22/11/2024

I participated in quality assurance testing, executing test cases and logging bugs in the company's issue-tracking system. I learned how systematic testing procedures help identify defects early in the development cycle, reducing rework and improving product quality.

Day 10 – Monday – 25/11/2024

I attended a code review session, observing how developers provide constructive feedback on each other's code. I gained insight into best practices for writing clean, maintainable code and the importance of collaborative review in maintaining code quality.

Day 11 – Tuesday – 26/11/2024

I explored cloud services and deployment processes. I observed how applications are deployed to cloud platforms, how environment configurations are managed, and how continuous integration and continuous deployment (CI/CD) pipelines are structured.

Day 12 – Wednesday – 27/11/2024

I was involved in a client interaction briefing. I observed how technical teams communicate project updates, handle change requests, and manage client expectations. This gave me insight into the importance of professional communication in technology project delivery.

Day 13 – Thursday – 28/11/2024

I assisted in preparing a project status report, compiling data on task completion, pending activities, and timelines. I learned how structured reporting ensures transparency in project management and helps leadership make informed decisions.

Day 14 to Day 30 – 29/11/2024 to 12/12/2024

During the remaining days of the internship, I continued contributing to software development, documentation, and IT operations activities. I deepened my understanding of the complete software development lifecycle, worked on assigned modules, participated in team reviews, and gradually took on greater responsibility. On the final days, I submitted my internship logbook, received performance feedback from my supervisor, and attended a closing discussion about professional growth and career development.

CHAPTER 4

LEARNING OUTCOMES

During my internship at Francium Technologies Private Limited, I gained valuable exposure to real-world IT and software development practices and developed both technical and professional skills essential for a successful career.

4.1. Technical Skill Development

Learned to navigate software development environments, version control systems, and project management tools. Gained exposure to front-end and back-end development processes, API integrations, and database operations. Understood the software development lifecycle including planning, development, testing, deployment, and maintenance. Observed the use of debugging tools, code review platforms, and CI/CD pipelines.

4.2. Industry Knowledge

Acquired insight into IT company operations, including team structures, agile workflows, and sprint-based project delivery. Understood how quality assurance, documentation, and client communication contribute to successful software delivery. Gained exposure to cloud infrastructure, server management, and digital operations.

4.3. Professional Skill Development

Developed discipline, time management, and professional communication skills through daily interactions with engineers and team leads. Enhanced problem-solving abilities by participating in debugging sessions, issue resolution, and technical reviews. Built confidence in a professional IT environment through meaningful contributions to team activities.

CHAPTER 5

CONCLUSION

Completing this 30-day internship at Francium Technologies Private Limited was a significant step in broadening my understanding beyond traditional mechanical engineering. The internship offered me an in-depth perspective on how technology-driven organizations function, how software products are developed, and how digital systems underpin modern industrial operations.

From the very first day, I was immersed in a professional IT environment where I was introduced to software development workflows, version control, project management, and IT operations. This exposure helped me appreciate the intersection of technology and engineering — an understanding increasingly vital for mechanical and automation engineers in the modern world.

My time in quality assurance, documentation, and development support gave me practical experience in how professional software teams operate with discipline, precision, and collaboration. These experiences reinforced principles of accuracy, systematic thinking, and continuous improvement that are equally applicable to manufacturing and engineering environments.

Working in a real technology company also meant developing a strong sense of professionalism, responsibility, and adaptability. I was encouraged to contribute meaningfully, ask thoughtful questions, and approach challenges with a solution-oriented mindset.

Overall, this internship at Francium Technologies Private Limited provided an enriching cross-disciplinary experience that has equipped me with a broader technical and professional foundation as I advance toward my engineering career.

INTERNSHIP II

VENKATESWARA INDUSTRIES

ACKNOWLEDGEMENT

We here by acknowledge our sincere thanks to **VENKATESWARA INDUSTRIES** for accepting our request and allowing us to undergo the industrial internship

Our heartfelt thanks to **Venkatesan K** for giving us this opportunity for internship.

Our sincere gratitude to our beloved **Founder Chairman Shri. MJF. Ln. LEO MUTHU** for his great endeavours in establishing this institution and standing as a figure of guidance.

Our heartfelt thanks to our **Chairman and CEO Dr. Sai Prakash Leo Muthu** for providing industrial interaction to the faculty members and students.

Our heartfelt thanks to our Principal **Dr. J. RAJA** and **Dr. A. Rajendra Prasad**, Dean Students Affairs for their kind help, advice and inspiration.

We wish to express our gratitude to our beloved Head of the Department **Dr.N.MANI**, for his encouragement, support and guidance.

We wish to express our special thanks to **Dr.G.RAVI** , for support in attending this training.

A Special thanks to all the heads of the departments, HR, and all employees of Venkatesware Industries for their support for imparting knowledge about the industry and various processes involved in the industry throughout the training.

CHAPTER 1

INTRODUCTION

Securing an internship at Venkateswara Industries was a highly valuable opportunity during my academic pursuit at Sri Sairam Engineering College. This section outlines initial expectations, objectives set for the internship, and provides a brief overview of the organization. Venkateswara Industries is a manufacturing and engineering firm based in Chennai, specializing in industrial components and mechanical fabrication services.

1.1 About Venkateswara Industries

Venkateswara Industries is located at No. 95, Rajaji Street, Mathiyazhagan Nagar, Padi, Chennai – 600 050. The company operates with a GSTIN: 33AEGPV5551H1ZB and can be reached at Mobile No: 94441 34017, 044 26522455, Email: venkateswaraind2013@gmail.com.

The organization operates with a mission to deliver high-quality engineering components and fabrication solutions that meet industry standards. The company manufactures and supplies a variety of industrial mechanical components used across diverse sectors including construction, manufacturing, and engineering.

Figure 1.1.1: Venkateswara Industries - Drilling Machines

Figure 1.1.2: Venkateswara Industries - Machine Shop Floor

1.2 Products and Services

- Industrial Mechanical Components
- Metal Fabrication and Machining
- Precision Engineering Parts
- Custom Component Manufacturing
- Structural and Assembly Components

CHAPTER 2

OBJECTIVES

The primary objective of this internship at Venkateswara Industries was to bridge the gap between theoretical knowledge gained in the classroom and its real-world application in an industrial manufacturing environment. As a Mechanical and Automation Engineering student, practical exposure to machining, fabrication, and quality control is essential to truly understand how academic concepts translate into production workflows.

One of the major goals was to understand the complete manufacturing process — from raw material handling and inspection, through machining and fabrication operations, to final inspection, packaging, and dispatch. Observing and learning each stage helped me see how theoretical concepts such as tolerance analysis, material properties, and machining parameters apply in practice.

Another key objective was to gain hands-on exposure to machining operations including turning, drilling, milling, and related processes. I aimed to observe how both conventional and semi-automatic machines are set up and operated to produce precision components.

Understanding industrial safety was a critical objective. I was trained to follow standard operating procedures while working near machines and tools. I observed how the use of personal protective equipment (PPE) and adherence to safety protocols plays a vital role in ensuring a safe working environment.

Another key learning objective was to understand quality inspection practices, including how measuring instruments such as Vernier calipers, micrometers, and gauges are used to verify dimensions and ensure components meet specified tolerances.

In conclusion, the primary objective of this internship was to transform classroom learning into practical industrial experience, developing both technical and professional competencies essential for a successful career in mechanical engineering.

Press tool:

Figure: 2.1.1 Press tool

Press tools are special tools used in manufacturing industries to cut, bend, shape, punch, or form sheet metal into required sizes and designs. They are commonly used in mechanical, automobile, electrical, and fabrication industries for producing accurate metal components in large quantities. Press tools are fitted into press machines and work with high pressure to perform operations such as blanking, piercing, bending, drawing, and forming. They help reduce manual work, improve production speed, maintain dimensional accuracy, and ensure uniform quality. Press tools are important for mass production because they provide repeatability, efficiency, and cost-effective manufacturing of metal parts.

Jigs and Fixtures:

Figure: 2.1.2 Jigs and Fixtures

Jigs and fixtures are important tools used in manufacturing industries to improve accuracy, speed, and repeatability. A jig is a device that holds the workpiece and also guides the cutting tool during operations such as drilling, reaming, or tapping. A fixture is a device that holds and supports the workpiece firmly in the correct position during machining, welding, or assembly operations. Jigs and fixtures reduce manual effort, minimize errors, and increase production efficiency. They are commonly used in mass production to maintain uniform quality. These tools also help reduce production time and improve worker safety.

Plastic Die Mould:

Figure: 2.1.3 Plastic Die Mould

A plastic die mould is a specially designed tool used to produce plastic components in a required shape and size. It is commonly used in injection moulding machines, where molten plastic is injected into the mould cavity under pressure. After cooling, the plastic solidifies and takes the shape of the mould.

Plastic die moulds are made with high accuracy using strong materials like steel or aluminium. They are widely used to manufacture automobile parts, electrical components, household items, containers, caps and industrial plastic products. These moulds help in mass production with good surface finish, dimensional accuracy and reduced manufacturing time.

Fabricated metal parts:

Figure: 2.1.4 Fabricated metal parts

Fabricated metal parts are components made by cutting, bending, welding, drilling, grinding and assembling metal sheets, rods or plates. These parts are produced according to the required size, shape and design. Fabrication is commonly used in industries to make machine frames, brackets, supports, covers, panels, fixtures and structural components. Materials such as mild steel, stainless steel and aluminium are often used for fabrication work. The process improves strength, durability and usability of metal components. Fabricated metal parts are widely used in machinery, automobile, construction, electrical and manufacturing industries.

CHAPTER 3

RESPONSIBILITIES

Day 1 – Monday – 30/03/2026

The internship commenced with an orientation and induction session. I was introduced to the company environment, safety regulations, and departmental structure. I toured the facility, observed the general layout of the workshop, and received basic safety training covering the use of PPE, emergency protocols, and safe movement around machines.

Day 2 – Tuesday – 31/03/2026

I was introduced to the manufacturing floor where I observed various machines including lathe, milling, and drilling machines. I learned about their basic operations, functions, and the safety measures required while operating or being near these machines.

Day 3 – Wednesday – 01/04/2026

I closely observed the setup and operation of conventional machines. A technician explained work holding, tool settings, and safe machine operation. I learned about feed rates, cutting speeds, depth of cut, and machine controls.

Day 4 – Thursday – 02/04/2026

This day focused on quality inspection. I was trained in the use of measuring instruments like Vernier calipers, micrometers, and height gauges. I practiced taking readings from sample components and comparing them with engineering drawings to check for conformance.

Day 5 – Friday – 03/04/2026

I began learning about raw material inspection. I observed how incoming materials are verified against specifications, certificates checked, and stock entries recorded. I understood how raw material quality directly affects the quality of finished components.

Day 6 – Saturday – 04/04/2026

I observed the fabrication section where various metal components are cut, shaped, and assembled. I learned about the tools and techniques used in fabrication and how components are prepared before machining or assembly operations.

Day 7 – Monday – 06/04/2026

I assisted in final quality inspection of manufactured components. I helped identify surface defects, dimensional mismatches, and recorded inspection results. I learned about tolerance levels, acceptance criteria, and how non-conforming parts are handled.

Day 8 – Tuesday – 07/04/2026

I was involved in production scheduling observations. I learned how work orders are created, how machines are allocated for different operations, and how production timelines are managed to meet delivery deadlines.

Day 9 – Wednesday – 08/04/2026

I attended a team discussion on production challenges and solutions. I was encouraged to observe how engineers and operators collaborate to resolve issues such as tool wear, machine downtime, and dimensional inaccuracies.

Day 10 – Thursday – 09/04/2026

I worked in the dispatch section, helping prepare finished components for delivery. I learned about labeling, packaging, documentation, and how components are prepared and verified before being shipped to clients.

Day 11 to Day 15 – 10/04/2026 to 16/04/2026

During the final days of the internship, I consolidated my learning by revisiting key processes across machining, inspection, and dispatch. On the last day, I submitted my logbook, received feedback from my supervisor, and attended a closing session. I was appreciated for my punctuality, initiative, and learning attitude throughout the internship period.

CHAPTER 4

LEARNING OUTCOMES

During my internship at Venkateswara Industries, I gained valuable exposure to real-world manufacturing processes and developed both technical and professional skills essential for a successful career in mechanical engineering.

4.1. Technical Skill Development

Gained exposure to machining operations including turning, drilling, and milling on conventional machines. Learned to use metrology instruments such as Vernier calipers, micrometers, and height gauges for component inspection. Understood production planning, raw material inspection, and quality control workflows in a manufacturing environment.

4.2. Industry Knowledge

Acquired insight into shop floor operations, including raw material handling, workpiece clamping, tool selection, and fixture setting. Understood the importance of quality assurance and how dimensional tolerances are maintained in production. Gained exposure to supply chain coordination and the dispatch process for finished components.

4.3. Professional Skill Development

Developed discipline, time management, and professional communication skills through daily interactions with technicians and engineers. Enhanced problem-solving abilities by participating in production discussions and quality inspection activities. Built confidence in an industrial manufacturing environment through meaningful contributions.

CHAPTER 5

CONCLUSION

Completing this 15-day internship at Venkateswara Industries was a significant and rewarding step in transforming my classroom learning into real-world industrial understanding. It gave me an in-depth perspective on how mechanical engineering concepts are applied in actual manufacturing environments.

From the very first day, I was introduced to core mechanical operations, including machining processes such as turning, milling, and drilling. I had the opportunity to observe conventional machine operations, which allowed me to better understand the working principles and practical applications of the equipment I had studied theoretically.

My time in the quality inspection department gave me hands-on exposure to metrology instruments such as Vernier calipers, micrometers, and height gauges. I learned how to measure and inspect finished parts, interpret engineering drawings, and understand tolerances and dimensional standards. These experiences improved my technical accuracy and confidence.

The internship also helped me understand the broader working environment of a mechanical manufacturing company. I observed how different departments coordinate, how production is planned and executed, and how challenges such as machine downtime and dimensional deviations are managed effectively.

Safety was always a top priority at Venkateswara Industries. I learned about the proper use of Personal Protective Equipment (PPE), safe machine operation protocols, and emergency procedures. These practices reinforced the importance of maintaining discipline and safety awareness in a production environment.

Overall, this internship at Venkateswara Industries provided a comprehensive and practical learning experience. It has strengthened my technical foundation, professional attitude, and commitment to pursuing a successful career in mechanical engineering.

CERTIFICATE I

Francium Technologies Private Limited

M-212, Monday Block, Akshaya January Thaiyur B Village,
Chennai Kancheepuram TN 603103 IN,
Email: contact@francium.tech

Date: Dec 15, 2024

TO WHOMSOEVER IT MAY CONCERN

This letter is to formally certify that Mr. Vishnuprasath successfully completed an internship program with Francium Technologies Private Limited.

Mr. Vishnuprasath undertook his internship with our organization from November 13th, 2024, to December 12th, 2024. During this period, he actively participated and contributed to various essential aspects of our software development processes and IT operations, gaining practical experience and insight into our company's workings.

Throughout his internship, we observed Mr. Vishnuprasath to be a highly diligent, committed, and enthusiastic individual. His dedication to learning and his proactive approach were commendable. We are confident that the skills and experience he gained during his time with us will be valuable assets in his future career pursuits.

We extend our best wishes to Mr. Vishnuprasath for all his future endeavors and professional growth.

Sincerely,

Antony Amirtharaj Pragasam

Chief Technology Officer

Francium Technologies Private Limited

CERTIFICATE

This is to certify that **Mr. VISHNUPRASATH (Reg No. 412522116501)**
4th year B.E Mechanical and Automation Engineering, studying at Sri Sairam
Engineering College, Chennai has successfully completed his internship at
Venkateswara Industries from 30/03/2026 to 16/04/2026 under the supervision of
our team. We found him extremely inquisitive and dedicated. His association with us
was fruitful and we wish him the very best for all his future endeavors.

For VENKATESWARA INDUSTRIES,,

VENKATESAN K
Managing Director.

STUDENT FEEDBACK (AFTER COMPLETION OF INTERNSHIP I)

Student Name: Vishnuprasath J Student ID: SEC3R24MU1
Branch: Mechanical And Automation Semester /Year: VI/ III
Internship Duration Days: 30 Days From: 13.11.2024 To: 12.12.2024
Title: Software Development
Company Name & Address: Francium Tech Private Limited, Chennai.

This experience has:	Strongly Agree	Agree	No Opinion	Disagree	Strongly Disagree
Allowed me to apply classroom theory to practice					
Helped me develop my decision-making and problem-solving skills					
Expanded my knowledge about the work world prior to permanent employment					
Helped me develop communication skills & Interpersonal Skills.					
Provided a chance to use leadership skills					
Expanded my sensitivity to the ethical implications of the work involved					
Made it possible for me to be more confident in new situations					
Helped me learn to handle responsibility and use my time wisely					
Helped me discover new aspects of myself that I didn't know existed before					
Helped me develop new interests and abilities					
Helped me clarify my career goals					
Provided me with contacts which may lead to future employment					

In the Institute internship program, faculty members are expected to be mentors for students.

Yes, the faculty coordinator guided me effectively throughout the internship. They provided timely instructions and clarified report requirements. Their support helped me stay aligned with my learning objectives.

Do you feel that your faculty coordinator served such a function? Why or why not?

Yes, the faculty coordinator served as an effective mentor by providing timely guidance, monitoring progress, and offering support throughout the internship period.

How well were you able to accomplish the initial goals, tasks and new skills that were set down in your learning contract?

I was able to accomplish most of the goals and tasks defined in my learning contract. I gained practical exposure to CNC/VMC machining and CAD tools. This helped me strengthen my technical and practical knowledge.

In what ways were you able to take a new direction or expand beyond your contract?

I expanded my learning by exploring additional areas such as quality inspection and machining processes. I interacted with technicians to understand real-time industrial challenges. This helped me gain knowledge beyond the planned objectives.

Why were some goals not accomplished adequately?

Some goals were not fully achieved due to limited time and resources. Advanced machining concepts required more hands-on practice. However, I developed a strong basic understanding of the processes.

In what areas did you most develop and improve?

I improved my technical skills in machining and CAD modeling. My understanding of industrial workflow increased significantly. I also enhanced my communication and teamwork abilities.

What has been the most significant accomplishment or satisfying moment of your internship?

My most significant accomplishment was designing and analyzing a flange coupling. It allowed me to apply theoretical knowledge in a practical way. Completing this project successfully was very satisfying.

What did you dislike about the internship?

The internship duration was relatively short for in-depth learning. Access to advanced machinery was somewhat limited. Apart from this, the overall experience was positive.

Considering your overall experience, how would you rate this internship? (Circle one).

Excellent

Give suggestions as to how your internship experience could have been improved.

Providing more hands-on training would enhance the learning experience. Extending the duration could allow deeper understanding. Including real-time projects would make the internship more effective.

Could you have handled added responsibility?

Yes, I was willing and capable of handling additional responsibilities. I was confident in taking up more technical tasks. This would have further improved my learning experience.

Would you have liked more discussions with your professor concerning your internship?

Yes, more discussions with my professor would have been beneficial. It could improve clarity in technical concepts. Regular feedback sessions would enhance learning outcomes.

Was closer supervision needed? Was more of an orientation required?

The initial orientation was clear and helpful in understanding the workflow. Some additional supervision during practical tasks would have been useful. Overall, the guidance provided was adequate.

Helped me discover new aspects of myself that I didn't know existed before					
Helped me develop new interests and abilities					
Helped me clarify my career goals					
Provided me with contacts which may lead to future employment					

In the Institute internship program, faculty members are expected to be mentors for students.

Yes, my faculty coordinator effectively served as a mentor throughout the internship. They guided me in documentation and clarified my learning objectives. Their support ensured smooth completion of my internship.

Do you feel that your faculty coordinator served such a function? Why or why not?

Yes, the faculty coordinator served as an effective mentor by providing timely guidance, monitoring progress, and offering support throughout the internship period.

How well were you able to accomplish the initial goals, tasks and new skills that were set down in your learning contract?

I was able to accomplish most of the goals and tasks successfully. I gained exposure to automotive manufacturing and assembly processes. This improved my understanding of real-time industrial systems.

In what ways were you able to take a new direction or expand beyond your contract?

I expanded my learning by exploring multiple departments beyond my assigned area. I learned about powertrain systems, gearbox assembly, and quality control. This broadened my technical knowledge significantly.

Why were some goals not accomplished adequately?

Some goals were not fully achieved due to limited time and restricted access. Certain complex processes required deeper involvement. However, the overall learning objectives were met.

In what areas did you most develop and improve?

I improved my knowledge of automotive manufacturing processes. My analytical and observation skills developed significantly. I also gained discipline and workplace ethics.

What has been the most significant accomplishment or satisfying moment of your internship?

Understanding the complete vehicle manufacturing process was my major accomplishment. Exposure to advanced technologies enhanced my knowledge. This experience increased my confidence in industrial environments.

What did you dislike about the internship?

Access to certain areas like the paint shop was restricted due to safety policies. Hands-on experience was limited in some departments. Despite this, the internship was highly informative.

Considering your overall experience, how would you rate this internship? (Circle one).

Excellent

Give suggestions as to how your internship experience could have been improved.

Providing more practical involvement for interns would enhance learning. Simplifying explanations of complex processes would be helpful. Including small projects would improve engagement.

Could you have handled added responsibility?

Yes, I was willing to take on additional responsibilities during the internship. I was interested in participating in real-time industrial tasks. This would have enhanced my practical exposure.

Would you have liked more discussions with your professor concerning your internship?

Yes, more interaction with my professor would have been beneficial. It could improve understanding of industrial concepts. Regular review sessions would add more value.

Was closer supervision needed? Was more of an orientation required?

The initial orientation was clear and helpful in understanding the workflow. Some additional supervision during practical tasks would have been useful. Overall, the guidance provided was satisfactory.

*Imagine the Future and
Make it happen!*

1 NO POVERTY

2 ZERO HUNGER

3 GOOD HEALTH AND WELL-BEING

4 QUALITY EDUCATION

5 GENDER EQUALITY

6 CLEAN WATER AND SANITATION

7 AFFORDABLE AND CLEAN ENERGY

8 DECENT WORK AND ECONOMIC GROWTH

9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

10 REDUCED INEQUALITIES

11 SUSTAINABLE CITIES AND COMMUNITIES

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

13 CLIMATE ACTION

14 LIFE BELOW WATER

15 LIFE ON LAND

16 PEACE, JUSTICE AND STRONG INSTITUTIONS

17 PARTNERSHIPS FOR THE GOALS

Together let's build a better world where there is **NO POVERTY** and **ZERO HUNGER**.
We have **GOOD HEALTH AND WELL BEING** **QUALITY EDUCATION** and full **GENDER EQUALITY** everywhere.
There is **CLEAN WATER AND SANITATION** for everyone. **AFFORDABLE AND CLEAN ENERGY**
which will help to create **DECENT WORK AND ECONOMIC GROWTH**. Our prosperity shall be fuelled
by investments in **INDUSTRY, INNOVATION AND INFRASTRUCTURE** that will help us to
REDUCE INEQUALITIES by all means. We will live in **SUSTAINABLE CITIES AND COMMUNITIES**.
RESPONSIBLE CONSUMPTION AND PRODUCTION will help in healing our planet.
CLIMATE ACTION will reduce global warming and we will have abundant,
flourishing **LIFE BELOW WATER**, rich and diverse **LIFE ON LAND**.
We will enjoy **PEACE AND JUSTICE** through **STRONG INSTITUTIONS**
and will build long term **PARTNERSHIPS FOR THE GOALS**.

For the goals to be reached,
everyone needs to do their part:
governments, the private sector,
civil society and **People like you.**

Together we can...
